

BotanicalsPlus

*Natural Honey
Extracts & Derivatives*

BotanicalsPlus

What is it?

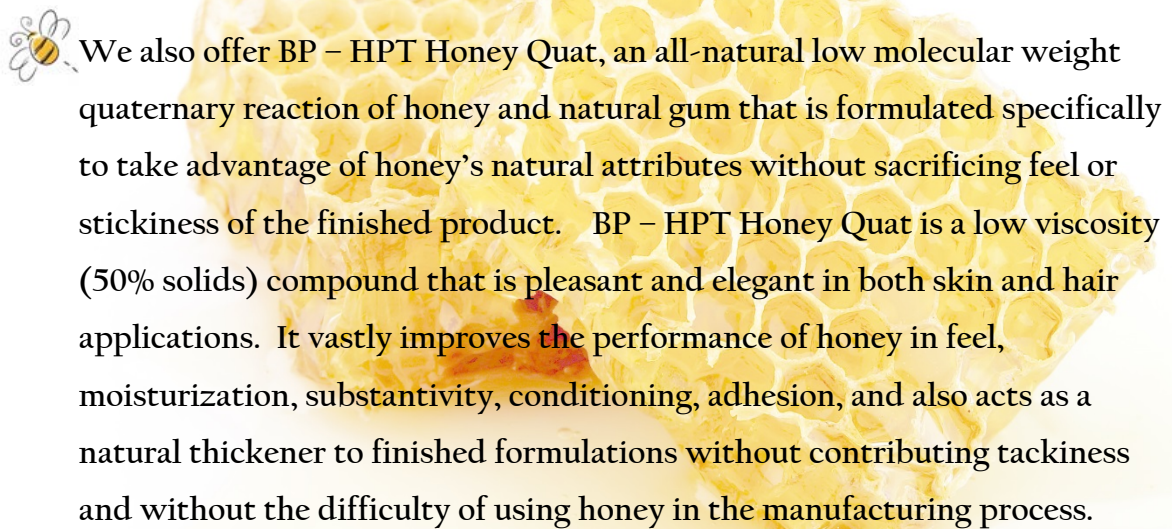

- All natural gift from nature, used from antiquity to modern times.
- Beneficial to skin, hair, nail, and body.
- All Natural, No Harm to Animals Product, Cruelty Free.

What is its function in Personal Care?

- Acts as an enhanced natural penetration enhancer to skin and hair.
- Full of natural anti-oxidants to protect and shield skin from sun damage and acts as a free radical scavenger in skin care.
- Soothes and moisturizes skin and acts as a natural humectant.
- Aids in providing a natural glow and vibrancy to skin.
- Strengthens hair follicles and re-enforces hair shaft allowing for better hair adhesion.
- Soothes and nourishes the lips and protects them from becoming dry and chapped in cold and dry weather conditions.
- Absorbs impurities from the pores and is beneficial to blemished, acne-prone skin.
- Has anti-bacterial and anti-fungal properties which help to heal wounds and burns and its high viscosity helps to supply a protective barrier to prevent infection.
- When applied to the hair, leaves a conditioned feel to the hair and a shinier, healthier look.
- Is an anti-irritant and suitable for sensitive skin and baby products.
- Makes the skin appear softer and younger with improved skin tone.
- Effective in both leave-on and rinse-off applications.

BotanicalsPlus

Natural Honey is characteristically tacky and is difficult to handle in Personal Care Applications. At Botanicals Plus, we have developed various ways to simplify the use of honey and amplify its benefits without sacrificing any of the benefits. We provide honey extracts in various forms of media (Aqueous systems, Propylene Glycol, Glycerin) and at various concentrations to promote the benefits of honey without sacrificing the end product feel.

 We also offer BP – HPT Honey Quat, an all-natural low molecular weight quaternary reaction of honey and natural gum that is formulated specifically to take advantage of honey's natural attributes without sacrificing feel or stickiness of the finished product. BP – HPT Honey Quat is a low viscosity (50% solids) compound that is pleasant and elegant in both skin and hair applications. It vastly improves the performance of honey in feel, moisturization, substantivity, conditioning, adhesion, and also acts as a natural thickener to finished formulations without contributing tackiness and without the difficulty of using honey in the manufacturing process.

How is it used?
