

OligoHyaferre

Hydrolyzed Sodium Hyaluronate

OligoHyaferre consists of hyaluronic acid oligosaccharides with molecular weight lower than 5 kDa. These very short, highly biologically active fragments of hyaluronic acid penetrate deep into the skin where they stimulate natural healing processes and angiogenesis for better skin nourishment. OligoHyaferre induces production of endogenous hyaluronic acid and protects extracellular matrix from degradation. It also possesses anti-inflammatory properties and calms down irritated skin.

- * Skin elasticity improvement and wrinkle reduction
- * Supporting formation of new blood vessels for the skin nourishing
- * Stimulation of endogenous hyaluronic acid
- * Skin calming
