Plant Story

Equisetum arvense is a perennial plant, grown throughout temperate regions of the Northern Hemisphere. The stems are cylindrical and hollow. The young shoots are eaten as a vegetable in Korea in spring time. Horsetail is rich in silica and minerals, such as potassium and calcium, and contains several alkaloids and flavonoids. *E. arvense* is very astringent, good for staunching wounds and bleeding, and it helps to repair damaged connective tissue. In Korean folk medicine, it has been used as a hemostatic, diuretic, and anti-inflammatory agent. The plant was also used for irritable skin conditions such as eczema. The anti-oxidant activities of horsetail have recently been reported. The silicic acid in horsetail is known to be effective for skin tightening.

Product Information

- ❖ Product Name: Horsetail Extract(GPD)
- ❖ INCI Name Equisetum Arvense Extract
& IECIC Name:
- ❖ Dosage: 1 – 5%
- ❖ Formulation: Add to the formulation when the temperature is lower than 55°C.
Recommended to add after the cooling process.
- ❖ Storage: Avoid direct light or UV.
Keep it in a dry area at room temperature.
